TABLE OF CONTENT

01

Introduction

Gamma-Ray Astronomy.

02

Fermi-LAT Data Selection

Select All-sky Data With Condition Now!

03

Data Denoising

Enhanced The Data By Removing Noise.

04

Analysis New Sources

Analyze The Findings To Discover Additional Resources.

05

Conclusion

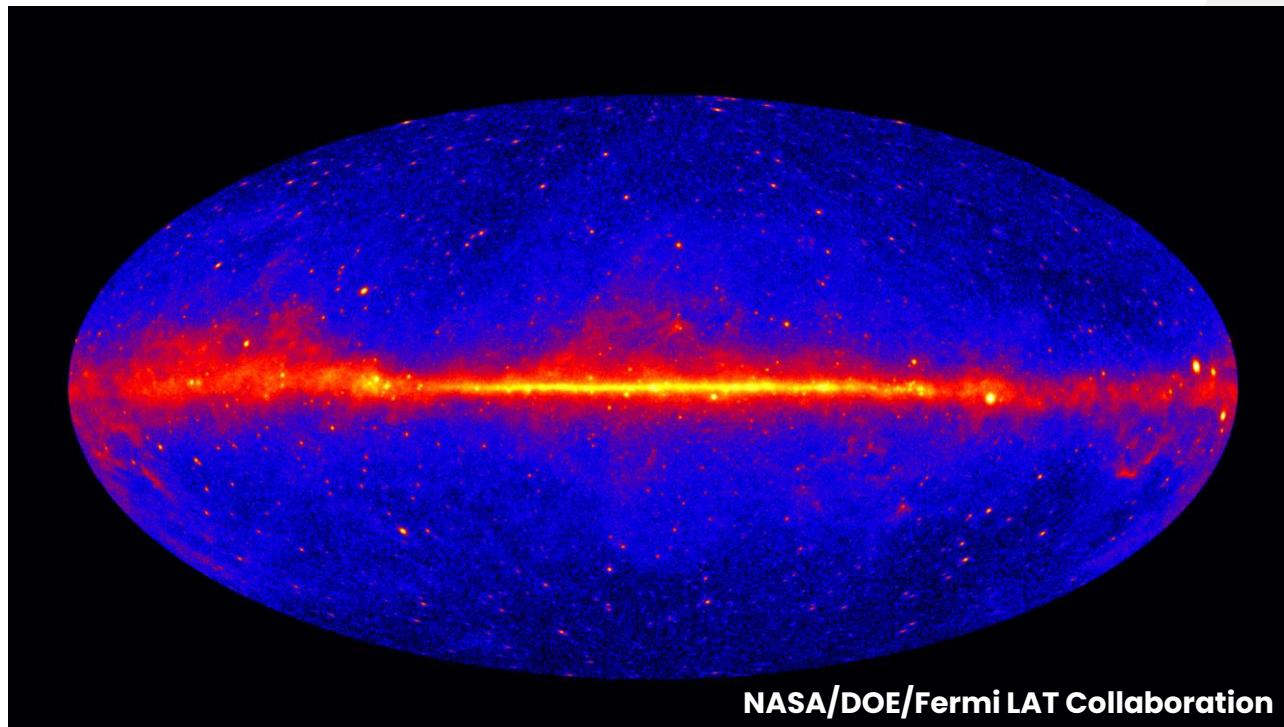

Let's Talk About New Findings!

INTRODUCTION

What is Gamma-Ray Astronomy?

- **Gamma rays have energies exceeding 100 keV.**

Fermi-LAT

Onboard the Fermi satellite

Energy sensitivity → 20 MeV to over >300 GeV

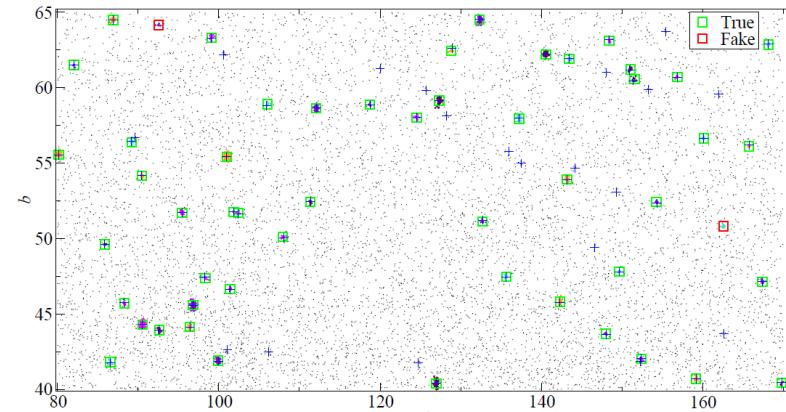

Events record accuracy → < 1μs.

Entire sky covering → every 3 hours.

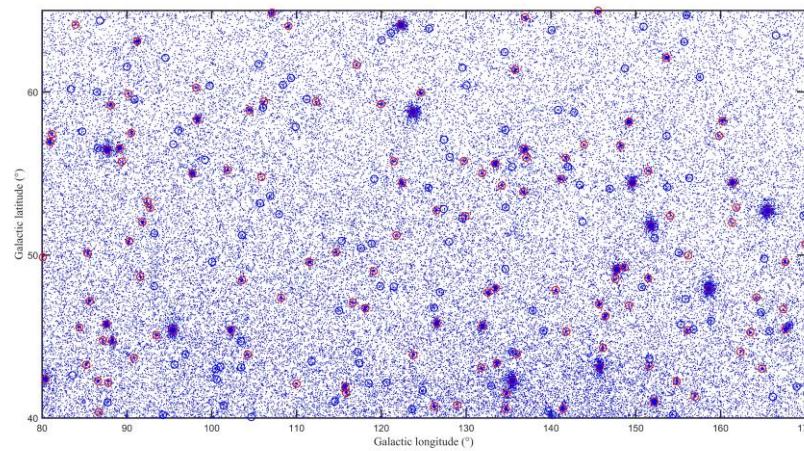

Field of view → 2.4 sr

What is the PROBLEM?

A. Tramacere et al (2013).

LAT Data Server (2023).

2

Fermi-LAT Data Selection

Fermi-LAT dataset:

Downloaded from the FSSC archive

Events include:

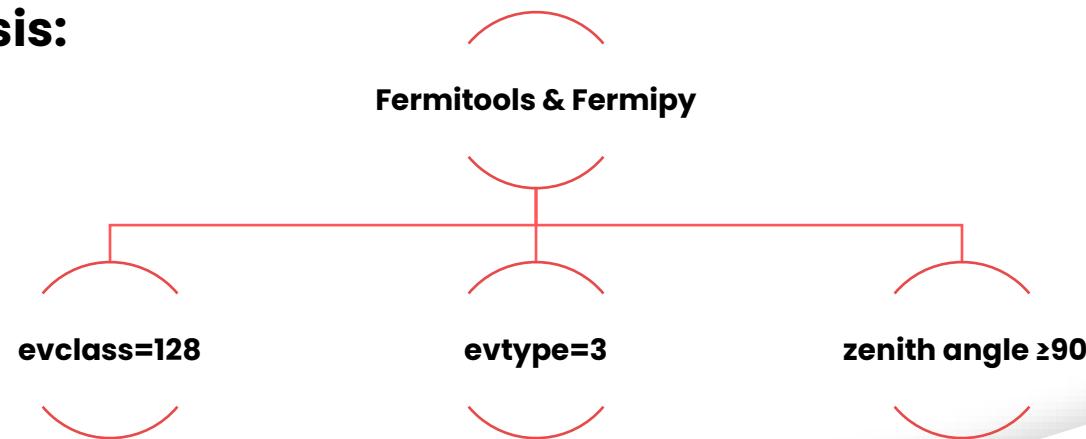

Photons → $E_\gamma > 3 \text{ GeV}$ (why?) (Soor et al 2023)

15 years of data from 4 August 2008 to 4 August 2023

$0 < l < 360$

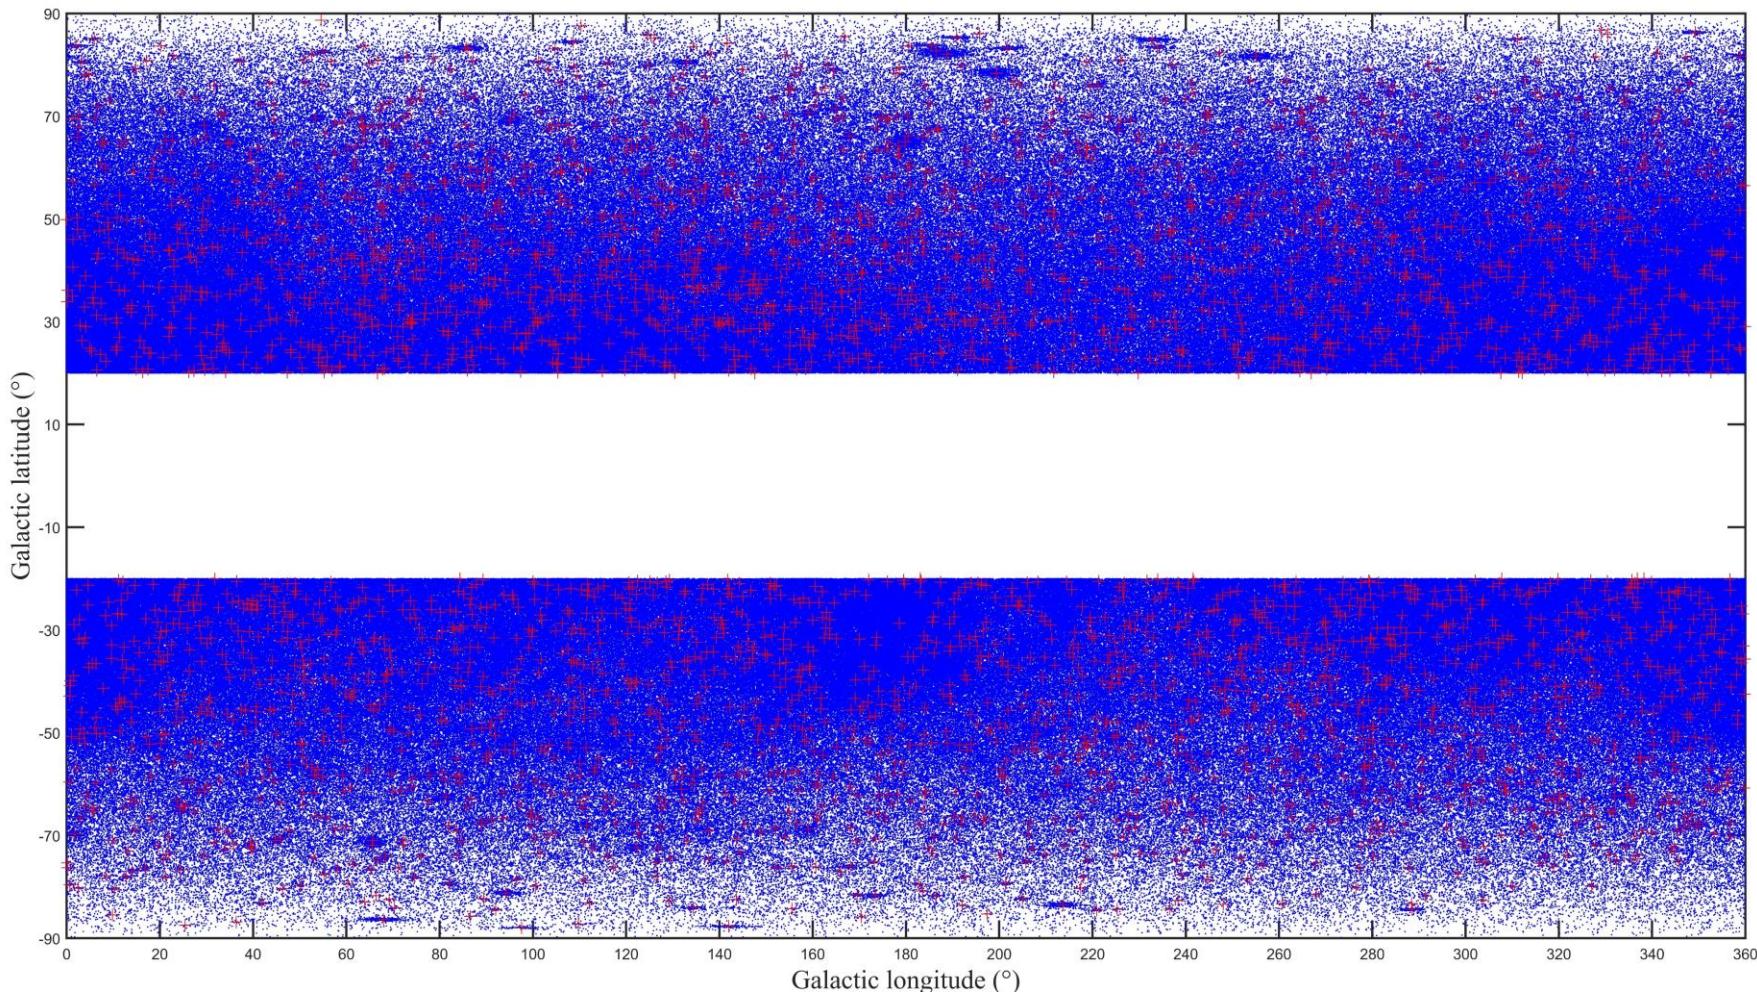

$|b| > 20$

Analysis:

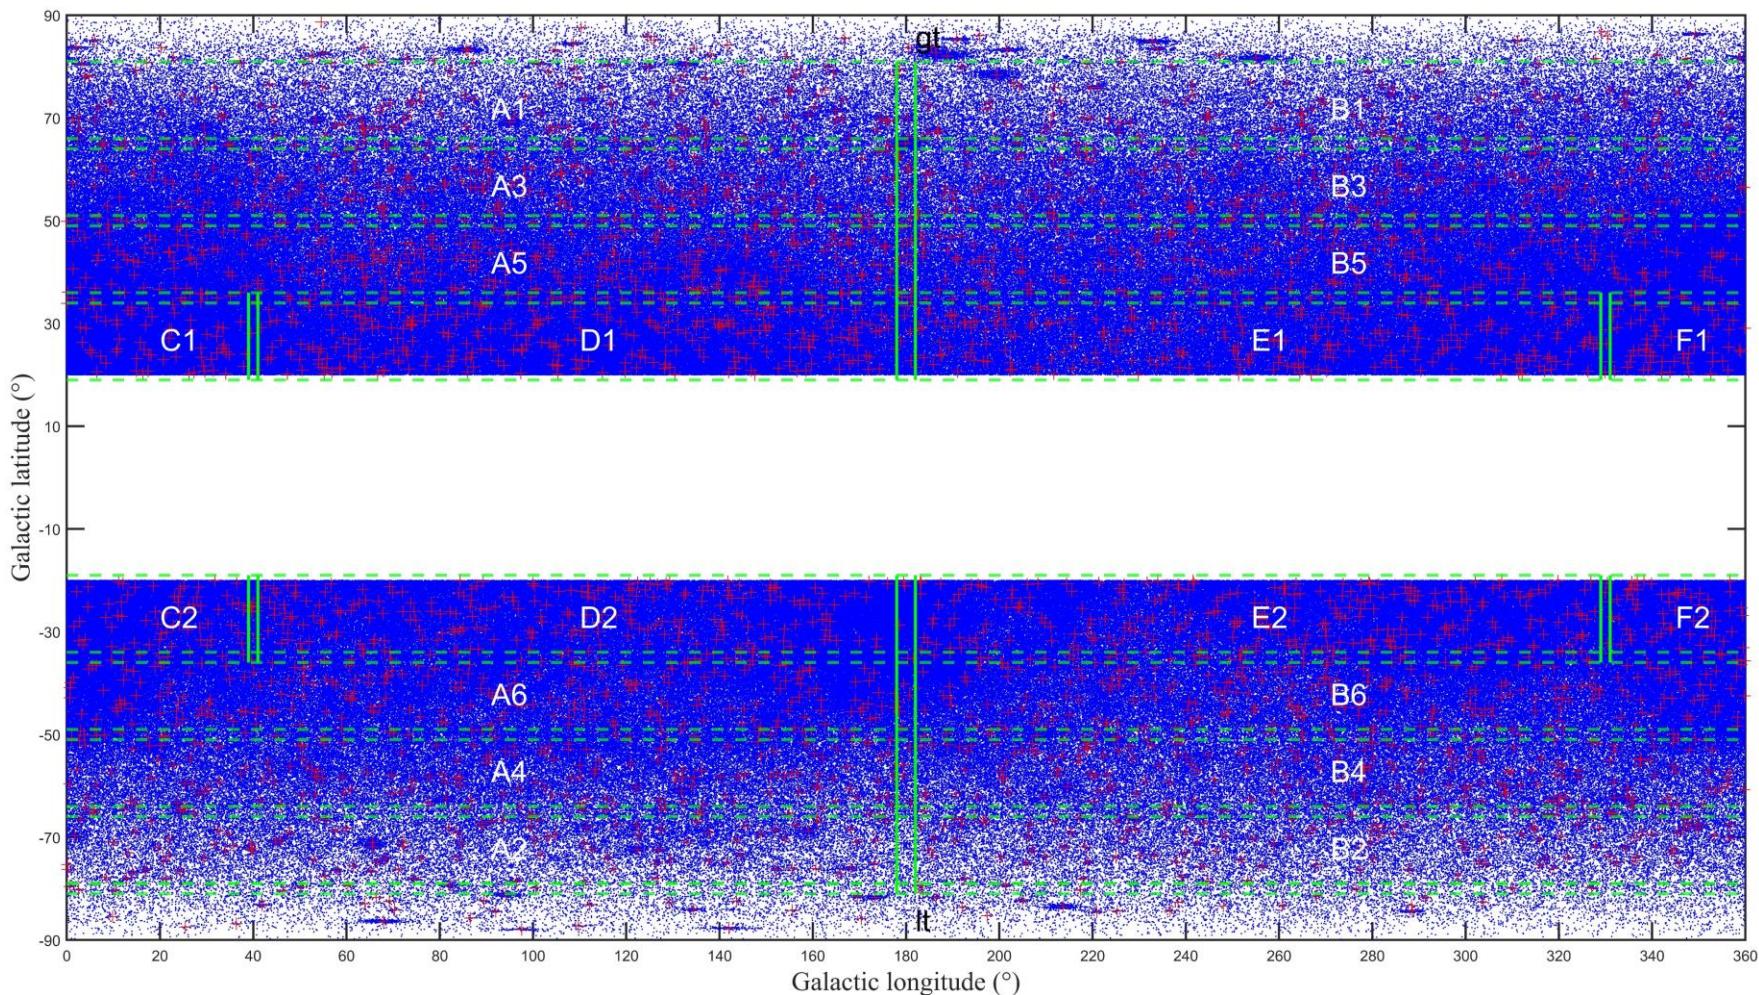

Scatter plot: 2M photons & 3936 sources

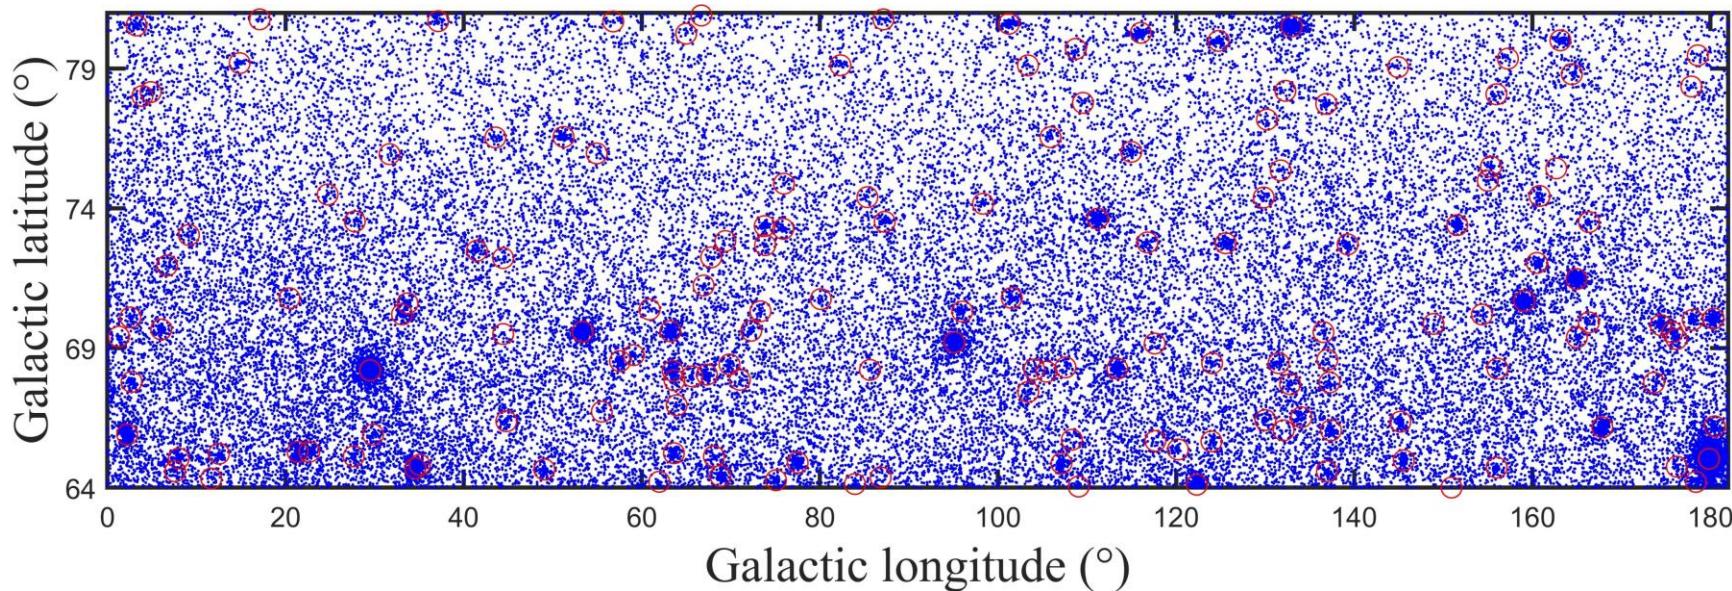

Let's cut the field to explore!

3

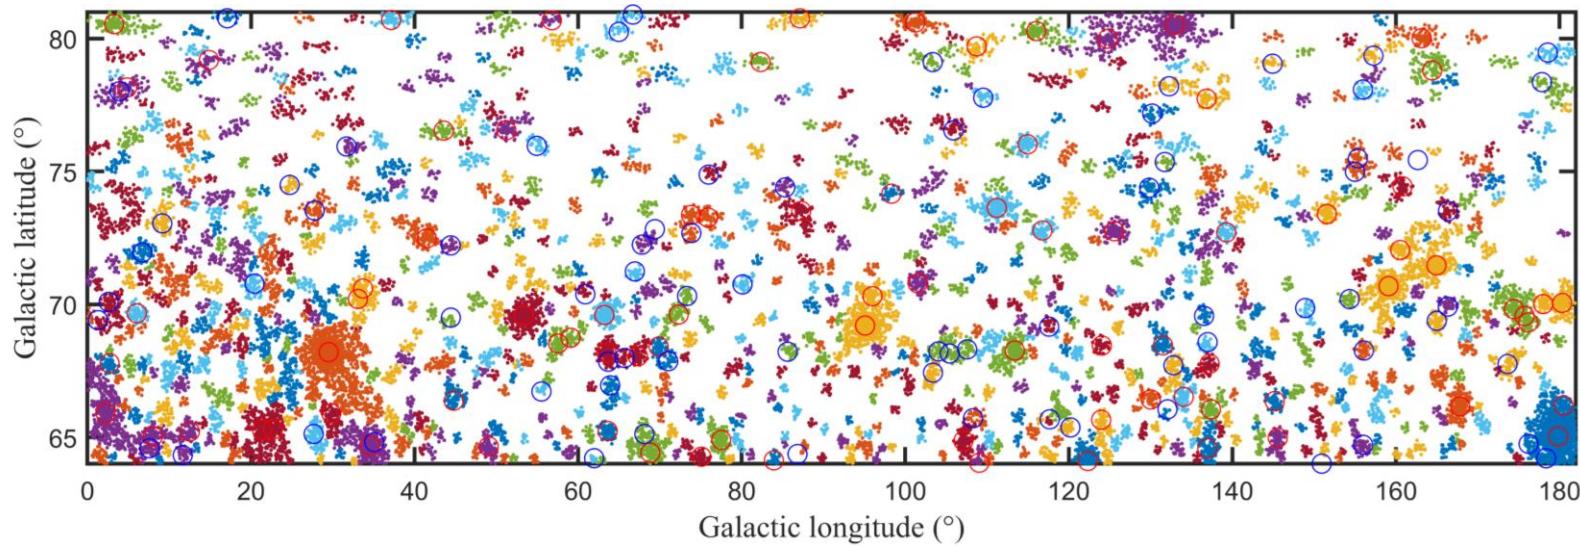

Data Denoising

**Let's consider a scenario where we choose from
one of the 22 fields.**

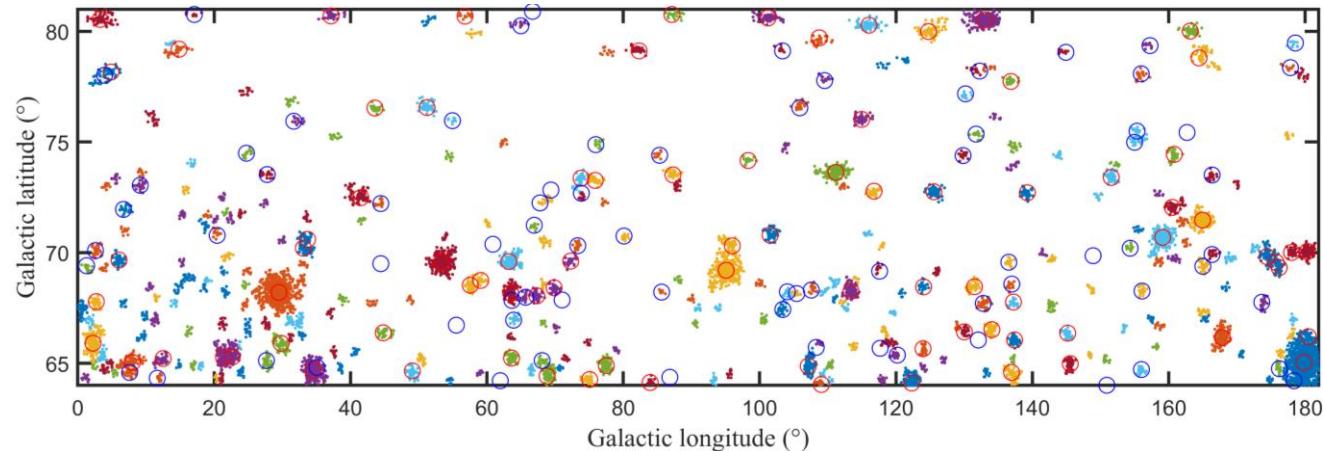

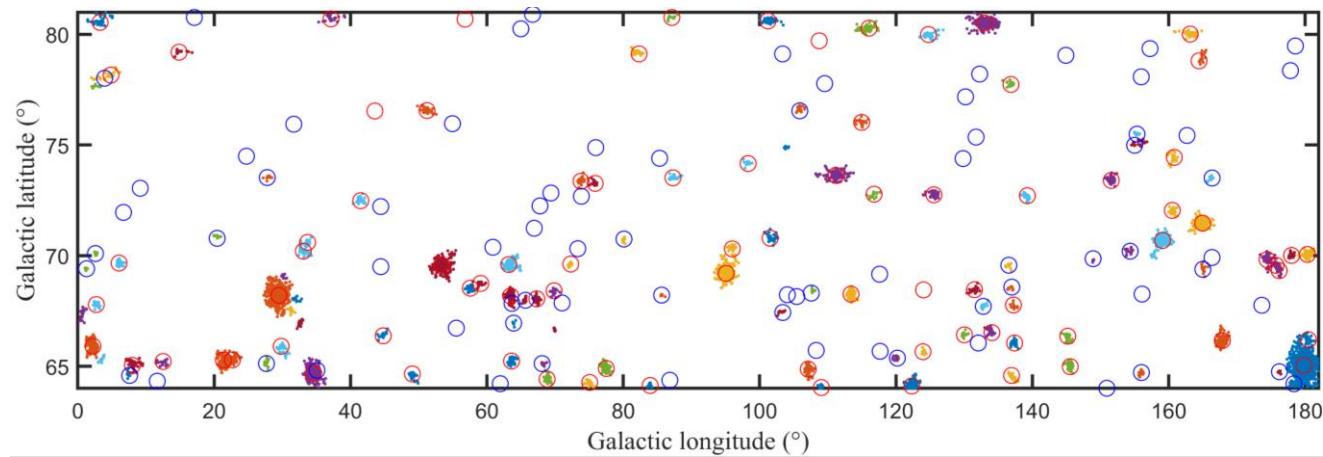

DBSCAN before denoising

DBSCAN after denoising

Apply DBSCAN on the Field With Cut $a > a^-$

Apply DBSCAN on the Field With Cut $a > a/2$

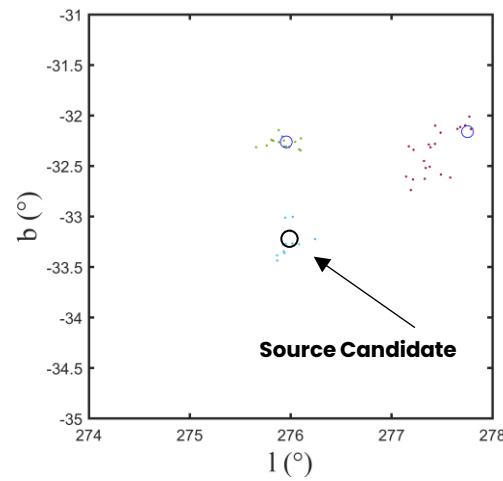

4

Analysis New Sources

**We completed our analysis and removed noise
from all 22 fields to discover new sources!**

After that, we discovered a total of **16 potential sources**!

Just like this one:

Cluster Sig

$$S = \sqrt{2 \left(N_{\text{on}} \ln \left[\frac{2N_{\text{on}}}{N_{\text{on}} + N_{\text{off}}} \right] + N_{\text{off}} \ln \left[\frac{2N_{\text{off}}}{N_{\text{on}} + N_{\text{off}}} \right] \right)},$$

Li & Ma (1983).

TS (Test Statistic)

$$\text{TS} = -2 \ln(L_{\max,0} / L_{\max,1}),$$

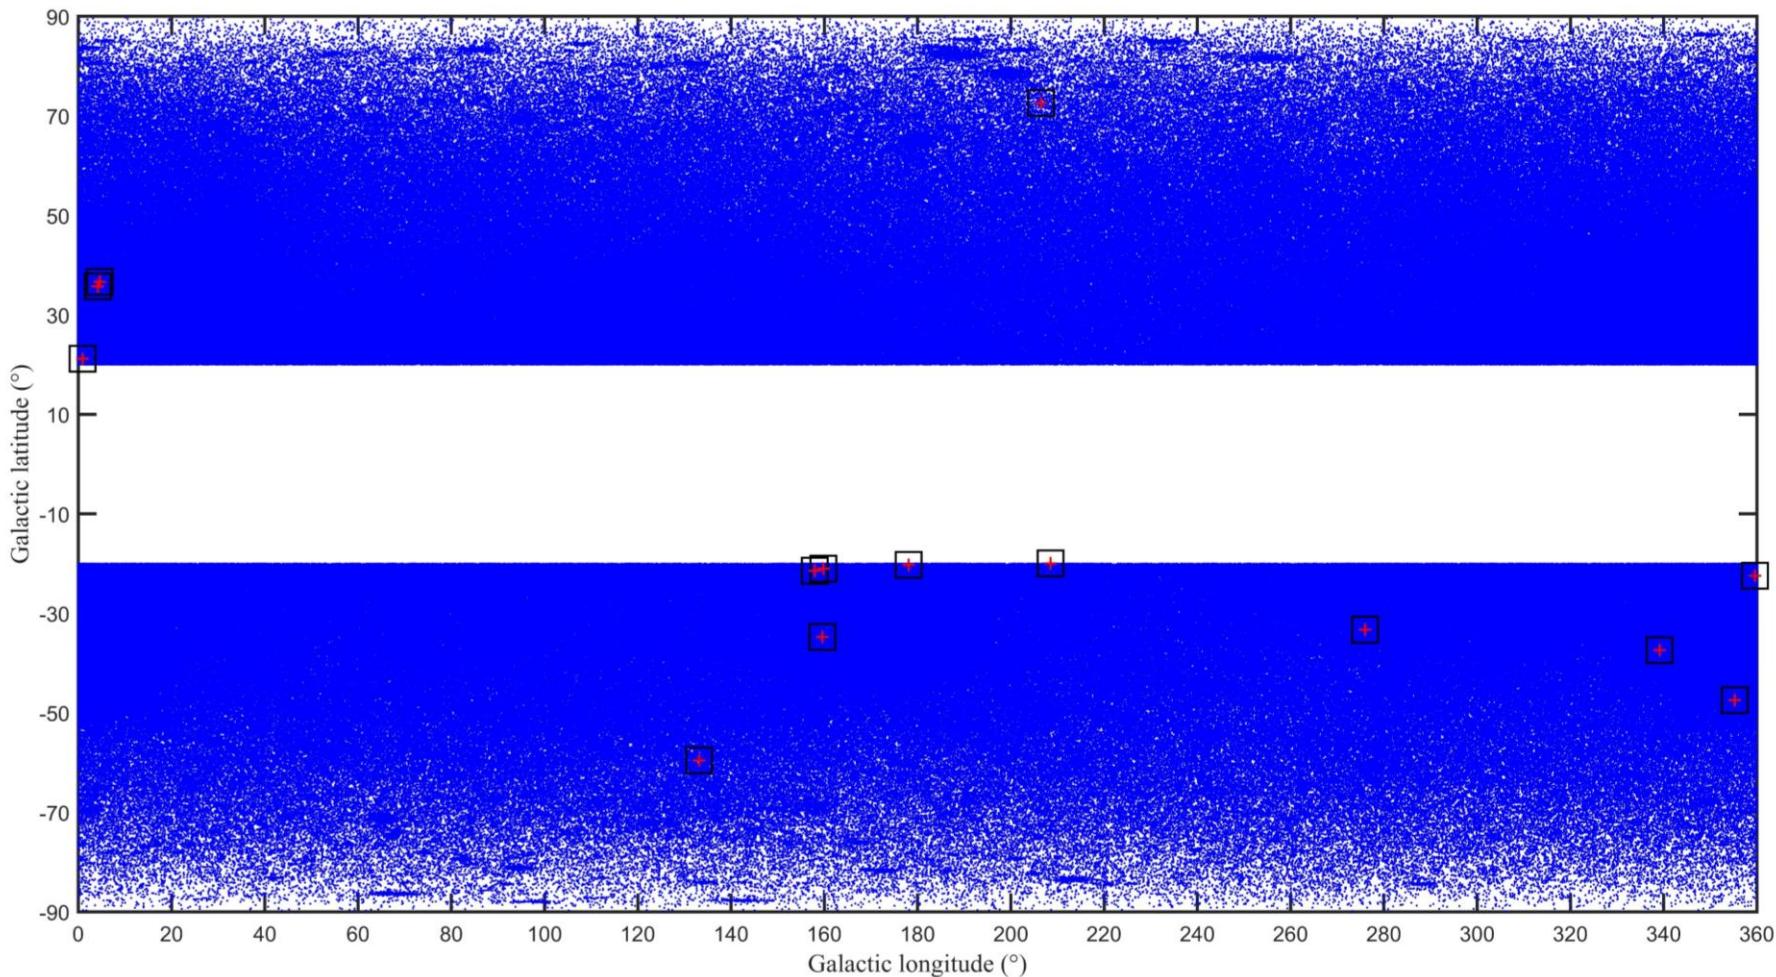

M. Ackermann et al (2013).

&

$$S = \frac{1}{2} \sqrt{TS}$$

Campana & Massaro (2021).

Potential sources on scatter plot

TS Map

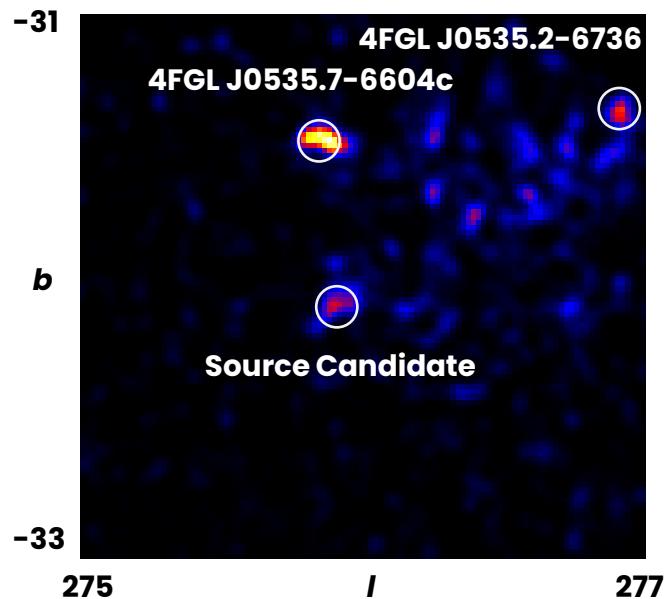

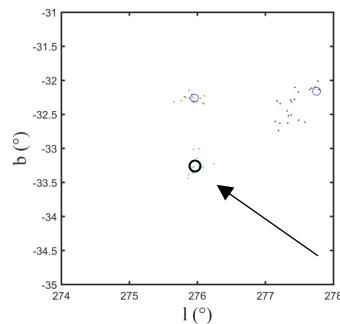

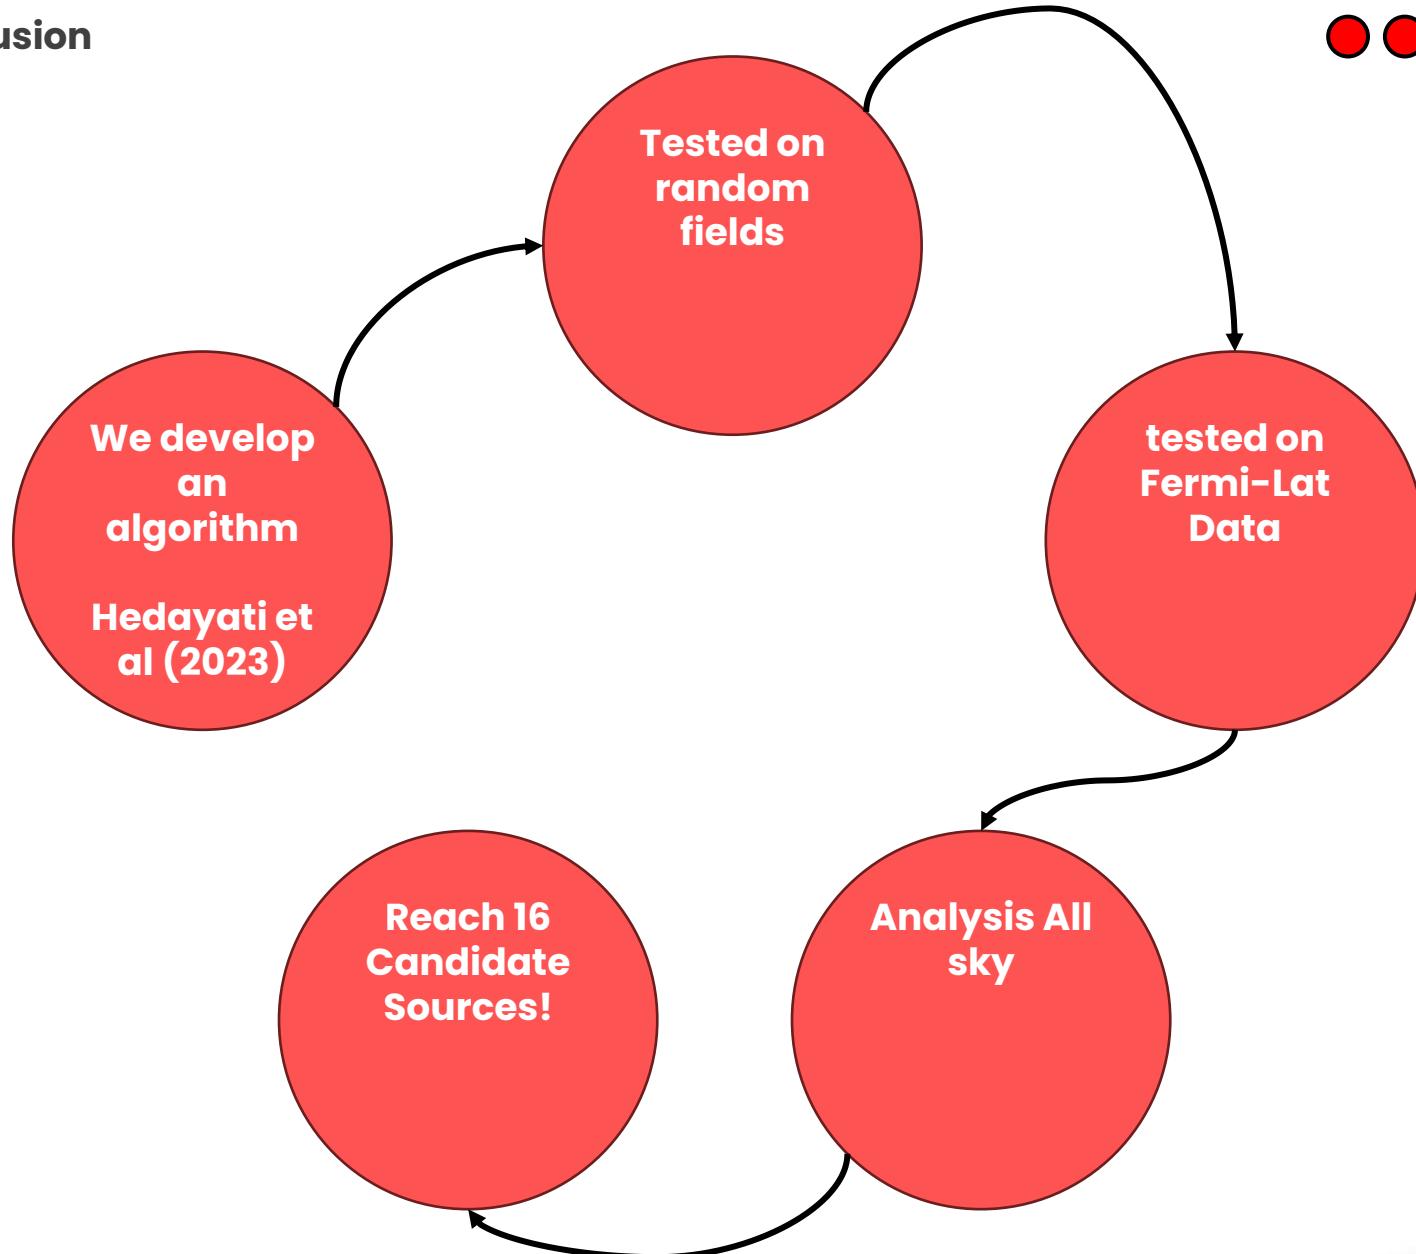

Table of results

Name	L	B	N	S	estimate TS
New Source 1	1.877	-66.208	5	2.596	26.957
New Source 2	133.141	-59.541	6	2.834	32.126
New Source 3	206.453	72.582	6	2.703	29.225
New Source 4	4.609	36.609	6	2.813	31.652
New Source 5	4.168	35.727	7	3.014	36.337
New Source 6	159.576	-34.746	7	3.017	36.409
New Source 7	355.246	-47.482	5	2.566	26.337
New Source 8	339.129	-37.404	5	2.592	26.874
New Source 9	0.944	21.174	5	2.717	29.528
New Source 10	178.076	-20.262	5	2.556	26.133
New Source 11	159.812	-21.028	7	2.964	35.141
New Source 12	157.951	-21.429	7	2.991	35.784
New Source 13	159.567	-34.740	5	2.589	26.812
New Source 14	208.502	-19.971	5	2.790	31.136
New Source 15	275.982	-33.250	9	3.412	46.567
New Source 16	359.550	-22.442	5	2.605	27.144
